The Car Hacker's Handbook Craig Smith 2016-03-01 Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven’t kept pace with today’s more hostile security environment, leaving millions vulnerable to attack. The Car Hacker’s Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle’s communication network, you’ll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker’s Handbook will show you how to: –Build an accurate threat model for your vehicle –Reverse engineer the CAN bus to fake engine signals –Exploit vulnerabilities in diagnostic and data-logging systems –Hack the ECU and other firmware and embedded systems –Feed exploits through infotainment and vehicle-to-vehicle communication systems –Override factory settings with performance-tuning techniques –Build physical and virtual test benches to try out exploits safely If you’re curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker’s Handbook your first stop.

Shared Meanings in the Film Music of Philip Glass Tristian Evans 2016-03-03 The study of music within multimedia contexts has become an increasingly active area of scholarly research. However, the application of such studies to musical genres outside the 'classical' film canon, or in television and other media remains largely unexplored in any detail. Tristian Evans demonstrates how postminimal music interacts with other media forms, focusing on the film music by Philip Glass, but also taking into account works by other composers such as Steve Reich, Terry Riley, John Adams and others inspired by minimalist and postminimal practices. Additionally, Evans develops innovative ways of analysing this music, based on an interdisciplinary approach, and draws on research from areas that include philosophy, linguistics and film theory. The book offers one of the first in-depth studies of Philip Glass's music for film, considering The Hours and Dracula, Naqoyqatsi, Notes on a Scandal and Watchmen, while examining re-applications of the music in new cinematic and televisual contexts. The book will appeal to musicologists but also to those working in the fields of film music, cultural studies, media studies and multimedia.

Integrated Computational Materials Engineering National Research Council 2008-10-24 Integrated computational materials engineering (ICME) is an emerging discipline that can accelerate materials development and unify design and manufacturing. Developing ICME is a grand challenge that could provide significant economic benefit. To help develop a strategy for development of this new technology area, DOE and DoD asked the NRC to explore its benefits and promises, including the benefits of a comprehensive ICME capability; to establish a strategy for development and maintenance of an ICME infrastructure, and to make recommendations about how best to meet these opportunities. This book provides a vision for ICME, a review of case studies and lessons learned, an analysis of technological barriers, and an evaluation of ways to overcome cultural and organizational challenges to develop the discipline.

That storyline drives Hell of a Book and is the scaffolding of something much larger and more urgent: Mott's novel also tells the story of Soot, a young Black boy living in a rural town in the recent past, and The Kid, a possibly imaginary child who appears to the author on his tour. As these characters' stories build and converge, they astonish. For while this heartbreaking and magical book entertains and is at once about family, love of parents and children, art and money, it's also about the nation's reckoning with a tragic police shooting playing over and over again on the news. And with what it can mean to be Black in America. Who has been killed? Who is The Kid? Will the author finish his book tour, and what kind of world will he leave behind? Unforgettably told, with characters who burn into your mind and an electrifying plot ideal for book club discussion, Hell of a Book is the novel Mott has been writing in his head for the last ten years. And in its final twists, it truly becomes its title.

Brand Innovation Manifesto John Grant 2006 The days of the image brands are over, and 'new marketing' has gone mainstream. The world's biggest companies are pursuing a post-advertising strategy, moving away from advertising and investing in leading edge alternatives. In the vanguard of the revolution has been John Grant, co-founder of the legendary agency St. Luke's and author of "The New Marketing Manifesto," whose radical thinking has informed a generation. Now Grant is set to stun the industry again. In "The Brand Innovation Manifesto," he redefines the nature of brands, showing why old models and scales no longer work and revealing that the key to success today is impacting people's lifestyles (think Starbucks, iPod and eBay). At the heart of the book is the concept of the 'brand molecule' to which new cultural ideas can be constantly added to keep pace with change. Cataloguing 32 classes of idea, Grant presents a practical approach to mixing and matching them within your own market to develop new brand ideas - and new ideas for existing brands.

Art and Agency Alfred Gell 1998-07-09 Alfred Gell puts forward a new anthropological theory of visual art, seen as a form of instrumental action: the making of things as a means of influencing the thoughts and actions of others. He argues that existing anthropological and aesthetic theories take an overwhelmingly passive point of view, and questions the criteria that accord art status only to a certain class of objects and not to others. The anthropology of art is here reformulated as the anthropology of a category of action: Gell shows how art objects embody complex intentionalities and mediate social agency. He explores the psychology of patterns and perceptions, art and personhood, the control of knowledge, and the interpretation of meaning, drawing upon a diversity of artistic traditions—European, Indian, Polynesian, Melanesian, and Australian. Art and Agency was completed just before Alfred Gell's death at the age of 51 in January 1997. It embodies the intellectual bravura, lively wit, vigour, and erudition for which he was admired, and will stand as an enduring testament to one of the most gifted anthropologists of his generation.

Despised Paul Embury 2020-11-18 The typical contemporary Labour MP is almost certain to be a university-educated Europhile who is more comfortable in the leafy enclaves of north London than the party's historic heartlands. As a result, Labour has become radically out of step with the culture and values of working-class Britain. Drawing on his background as a firefighter and trade unionist from Dagenham, Paul Embury argues that this disconnect has been inevitable since the Left political establishment swallowed a poisonous brew of economic and social liberalism. They have come to despise traditional working-class values of patriotism, family and faith and instead embraced globalisation, rapid demographic change and a toxic, divisive brand of identity politics. Embury contends that the Left can only revive if it speaks once again to the priorities of working-class people by combining socialist economics with the cultural politics of belonging, place and community. No one who wants to really understand why our politics has become so dysfunctional and what the Left can do to fix it can afford to miss this authentic, insightful and passionate book.

Contrary to popular belief, the Modular engine did not get its name from its design or sharing of certain parts among the engine family. Instead, the name was derived from a manufacturing plant protocol, "Modular," where the plant and its tooling could be changed out in a matter of hours to manufacture different versions of the engine family. The Modular engines are used in various Ford, Lincoln, and Mercury vehicles. Modular engines used in Ford trucks were marketed under the Triton name from 1997-2010 while the InTech name was used for a time at Lincoln for vehicles equipped with...
