Knowing Animals Laurence Simmons 2007 Drawing on a range of perspectives -philosophy, literary criticism, art history and cultural studies-the essays collected here explore unconventional ways of knowing animals, offering new insights into apparently familiar relationships between humans and other living beings.

Posthumanist Perspectives on Literary and Cultural Animals Krishanu Maiti 2021-09-11 This book offers Posthumanist readings of animal-centric literary and cultural texts. The contributors put the precepts and premises of humanism into question by seriously considering the animal presence in texts. The essays collected here focus primarily on literary and cultural texts from varied theoretically informed interdisciplinary perspectives advanced by critical approaches such as Critical Animal Studies and Posthumanism. Contributors select texts that cut across geographical and period boundaries and demonstrate how practices of close reading give rise to new ways of thinking about animals. By implicating the "animal turn" in the field of literary and cultural studies, this book urges us to problematize the separation of the human from other animals and rethink the hierarchical order of beings through close readings of select texts. It offers fresh perspectives on Posthumanist theory, inviting readers to revisit those criteria that created species' difference from the early ages of human civilization. This book constitutes a rich and thorough scholarly resource on the politics of representation of animals in literature and culture. The essays in this book are empirically and theoretically informed and explore a range of dynamic, captivating, and highly relevant topics. Comprising over 15 chapters by a team of international contributors, this book is divided into four parts: Contestation over Species Hierarchy and Categorization Animal (Re)constructions Interspecies Relationalities Intersectionality- Animal and Gender This book will be essential reading for students and researchers of Critical Animal Studies and Environmental Studies.

Routledge Handbook of Gender and Environment Sherilyn MacGregor 2017-07-14 The Routledge Handbook of Gender and Environment gathers together state-of-the-art theoretical reflections and empirical research from leading researchers and practitioners working in this transdisciplinary and transnational academic field. Over the course of the book, these contributors provide critical analyses of the gender dimensions of a wide range of timely and challenging topics, from sustainable development and climate change politics, to queer ecology and interspecies ethics in the so-called Anthropocene. Presenting a comprehensive overview of the development of the field from early political critiques of the male domination of women and nature in the 1980s to the sophisticated intersectional and inclusive analyses of the present, the volume is divided into four parts: Part I: Foundations Part II: Approaches Part III: Politics, policy and practice Part IV: Futures. Comprising chapters written by forty contributors with

different perspectives and working in a wide range of research contexts around the world, this Handbook will serve as a vital resource for scholars, students, and practitioners in environmental studies, gender studies, human geography, and the environmental humanities and social sciences more broadly.

The Routledge Companion to Animal-Human History Hilda Kean 2018-09-03 The Routledge Companion to Animal-Human History provides an up-to-date guide for the historian working within the growing field of animal-human history. Giving a sense of the diversity and interdisciplinary nature of the field, cutting-edge contributions explore the practices of and challenges posed by historical studies of animals and animal-human relationships. Divided into three parts, the Companion takes both a theoretical and practical approach to a field that is emerging as a prominent area of study. **Animals and the Practice of History** considers established practices of history, such as political history, public history and cultural memory, and how animal-human history can contribute to them. **Problems and Paradigms** identifies key historiographical issues to the field with contributors considering the challenges posed by topics such as agency, literature, art and emotional attachment. The final section, **Themes and Provocations**, looks at larger themes within the history of animal-human relationships in more depth, with contributions covering topics that include breeding, war, hunting and eating. As it is increasingly recognised that nonhuman actors have contributed to the making of history, **The Routledge Companion to Animal-Human History** provides a timely and important contribution to the scholarship on animal-human history and surrounding debates.

Routledge Handbook of Human-Animal Studies Garry Marvin 2019-12-14 Human-animal studies is an academic field that has grown exponentially over the past decade. It explores the whys, hows, and whats of human-animal relations: why animals are represented and configured in different ways in human cultures and societies around the world; how they are imagined, experienced, and given significance; what these relationships might signify about being human; and what about these relationships might be improved for the sake of the individuals as well as the communities concerned. The Routledge Handbook of Human-Animal Studies presents a collection of original essays from artists and scholars who have established themselves internationally on the basis of specific and significant new contributions to human-animal studies. This international, interdisciplinary handbook will be of interest to students and scholars of human-animal studies, sociology, anthropology, biology, environmental studies, geography, cultural studies, history, philosophy, media studies, gender studies, literature, psychology, ethology, and visual studies.

Human Minds and Animal Stories Wojciech Małeck 2019-02-07 The power of stories to raise our concern for animals has been postulated throughout history by countless scholars, activists, and writers, including such greats as Thomas Hardy and Leo Tolstoy. This is the

first book to investigate that power and explain the psychological and cultural mechanisms behind it. It does so by presenting the results of an experimental project that involved thousands of participants, texts representing various genres and national literatures, and the cooperation of an internationally-acclaimed bestselling author. Combining psychological research with insights from animal studies, ecocriticism and other fields in the environmental humanities, the book not only provides evidence that animal stories can make us care for other species, but also shows that their effects are more complex and fascinating than we have ever thought. In this way, the book makes a groundbreaking contribution to the study of relations between literature and the nonhuman world as well as to the study of how literature changes our minds and society. "As witnessed by novels like *Black Beauty* and *Uncle Tom's Cabin*, a good story can move public opinion on contentious social issues. In *Human Minds and Animal Stories* a team of specialists in psychology, biology, and literature tells how they discovered the power of narratives to shift our views about the treatment of other species. Beautifully written and based on dozens of experiments with thousands of subjects, this book will appeal to animal advocates, researchers, and general readers looking for a compelling real-life detective story." - Hal Herzog, author of *Some We Love, Some We Hate, Some We Eat : Why It's So Hard To Think Straight About Animals*

Animals, Anthropomorphism and Mediated Encounters Claire Parkinson 2019-07-23 This book critically investigates the pervasiveness of anthropomorphised animals in popular culture. Anthropomorphism in popular visual media has long been denounced for being unsophisticated or emotionally manipulative. It is often criticised for over-expressing similarities between humans and other animals. This book focuses on everyday encounters with visual representations of anthropomorphised animals and considers how attributing other animals with humanlike qualities speaks to a complex set of power relations. Through a series of case studies, it explores how anthropomorphism is produced and circulated and proposes that it can serve to create both misunderstandings and empathetic connections between humans and other animals. This book will appeal to academics and students interested in visual media, animal studies, sociology and cultural studies.

Routledge International Handbook of Irish Studies Renée Fox 2020-12-31 *Routledge International Handbook of Irish Studies* begins with the reversal in Irish fortunes after the 2008 global economic crash. The chapters included address not only changes in post-Celtic Tiger Ireland but also changes in disciplinary approaches to Irish Studies that the last decade of political, economic, and cultural unrest have stimulated. Since 2008, Irish Studies has been directly and indirectly influenced by the crash and its reverberations through the economy, political landscape, and social framework of Ireland and beyond. Approaching Irish pasts, presents, and futures through interdisciplinary and theoretically capacious lenses, the chapters in this volume reflect the myriad ways Irish Studies has responded to the economic precarity in the Republic, renewed instability in the North, the complex European politics of Brexit, global climate and pandemic crises, and the intense social change in Ireland catalyzed by all of these. Just as Irish society has had to dramatically reconceive its economic and global identity after the crash, Irish Studies has had to shift its theoretical modes and its objects of analysis in order to keep pace with these changes and upheavals. This book captures the dynamic ways the discipline has evolved since 2008, exploring how the age of austerity and renewal has transformed both Ireland and scholarly approaches to understanding Ireland. It will appeal to students and scholars of

Irish studies, sociology, cultural studies, history, literature, economics, and political science.

The Routledge Handbook of Religion and Animal Ethics

Andrew Linzey 2018-09-29 The ethical treatment of non-human animals is an increasingly significant issue, directly affecting how people share the planet with other creatures and visualize themselves within the natural world. The *Routledge Handbook of Religion and Animal Ethics* is a key reference source in this area, looking specifically at the role religion plays in the formation of ethics around these concerns. Featuring thirty-five chapters by a team of international contributors, the handbook is divided into two parts. The first gives an overview of fifteen of the major world religions' attitudes towards animal ethics and protection. The second features five sections addressing the following topics: Human Interaction with Animals Killing and Exploitation Religious and Secular Law Evil and Theodicy Souls and Afterlife This handbook demonstrates that religious traditions, despite often being anthropocentric, do have much to offer to those seeking a framework for a more enlightened relationship between humans and non-human animals. As such, *The Routledge Handbook of Religion and Animal Ethics* is essential reading for students and researchers in religious studies, theology, and animal ethics as well as those studying the philosophy of religion and ethics more generally.

Disability and Animality Stephanie Jenkins 2020-03-26

The fields of Critical Disability Studies and Critical Animal Studies are growing rapidly, but how do the implications of these endeavours intersect? *Disability and Animality: Crip Perspectives in Critical Animal Studies* explores some of the ways that the oppression of more-than-human animals and disabled humans are interconnected. Composed of thirteen chapters by an international team of specialists plus a Foreword by Lori Gruen, the book is divided into four themes: Intersections of Ableism and Speciesism Thinking Animality and Disability together in Political and Moral Theory Neurodiversity and Critical Animals Studies Melancholy, Madness, and Misfits. This book will be of interest to undergraduate and postgraduate students, as well as postdoctoral scholars, interested in Animal Studies, Disability Studies, Mad Studies, philosophy, and literary analysis. It will also appeal to those interested in the relationships between speciesism, ableism, saneism, and racism in animal agriculture, culture, built environments, and ethics.

The Rise of Critical Animal Studies Nik Taylor

2014-04-16 As the scholarly and interdisciplinary study of human/animal relations becomes crucial to the urgent questions of our time, notably in relation to environmental crisis, this collection explores the inner tensions within the relatively new and broad field of animal studies. This provides a platform for the latest critical thinking on the condition and experience of animals. The volume is structured around four sections: engaging theory doing critical animal studies critical animal studies and anti-capitalism contesting the human, liberating the animal: veganism and activism. *The Rise of Critical Animal Studies* demonstrates the centrality of the contribution of critical animal studies to vitally important contemporary debates and considers future directions for the field. This edited collection will be useful for students and scholars of sociology, gender studies, psychology, geography, and social work. *Routledge Handbook of Ecocultural Identity* Tema Milstein 2020-05-01 *The Routledge Handbook of Ecocultural Identity* brings the ecological turn to sociocultural understandings of self. The editors introduce a broad, insightful assembly of original theory and research on planetary positionalities in flux in the Anthropocene – or what in this Handbook cultural ecologist David Abram presciently renames the Humilocene, a new “epoch of

humility." Forty international authors craft a kaleidoscopic lens, focusing on the following key interdisciplinary inquiries: Part I illuminates identity as always ecocultural, expanding dominant understandings of who we are and how our ways of identifying engender earthly outcomes. Part II examines ways ecocultural identities are fostered and how difference and spaces of interaction can be sources of environmental conviviality. Part III illustrates consequential ways the media sphere informs, challenges, and amplifies particular ecocultural identities. Part IV delves into the constitutive power of ecocultural identities and illuminates ways ecological forces shape the political sphere. Part V demonstrates multiple and unspooling ways in which ecocultural identities can evolve and transform to recall ways forward to reciprocal surviving and thriving. The Routledge Handbook of Ecocultural Identity provides an essential resource for scholars, teachers, students, protectors, and practitioners interested in ecological and sociocultural regeneration. The Routledge Handbook of Ecocultural Identity has been awarded the 2020 Book Award from the National Communication Association's (USA) Environmental Communication Division.

Perspectives on Human-animal Communication Emily Plec 2013 Despite its inherent interdisciplinarity, the Communication discipline has remained an almost entirely anthropocentric enterprise. This book represents early and prominent forays into the subject of human-animal communication from a Communication Studies perspective, an effort that brings a discipline too long defined by that fallacy of division, human or nonhuman, into conversation with animal studies, biosemiotics, and environmental communication, as well as other recent intellectual and activist movements for reconceptualizing relationships and interactions in the biosphere. This book is a much-needed point of entry for future scholarship on animal-human communication, as well as the whole range of communication possibilities among the more-than-human world. It offers a groundbreaking transformation of higher education by charting new directions for communication research, policy formation, and personal and professional practices involving animals.

Routledge Handbook of Biosecurity and Invasive Species Kezia Barker 2021-05-12 This handbook provides a comprehensive overview of the assessment and management of potentially dangerous infectious diseases, quarantined pests, invasive (alien) species, living modified organisms and biological weapons, from a multitude of perspectives. Issues of biosecurity have gained increasing attention over recent years but have often only been addressed from narrow disciplines and with a lack of integration of theoretical and practical approaches. The Routledge Handbook of Biosecurity and Invasive Species brings together both the natural sciences and the social sciences for a fully rounded perspective on biosecurity, shedding light on current national and international management frameworks with a mind to assessing possible future scenarios. With chapters focussing on a variety of ecosystems – including forests, islands, marine and coastal and agricultural land – as well as from the industrial scale to individual gardens, this handbook reviews the global state of invasions and vulnerabilities across a wide range of themes and critically analyses key threats and threatening activities, such as trade, travel, land development and climate change. Identifying invasive species and management techniques from a regional to international scale, this book will be a key reference text for a wide range of students and academics in ecology, agriculture, geography, human and animal health and interdisciplinary environmental and security studies.

Urban Animals Tora Holmberg 2015-03-27 The city includes

opportunities as well as constraints for humans and other animals alike. Urban animals are often subjected to complaints; they transgress geographical, legal as and cultural ordering systems, while roaming the city in what is often perceived as uncontrolled ways. But they are also objects of care, conservation practices and bio-political interventions. What then, are the "more-than-human" experiences of living in a city? What does it mean to consider spatial formations and urban politics from the perspective of human/animal relations? This book draws on a number of case studies to explore urban controversies around human/animal relations, in particular companion animals: free ranging dogs, homeless and feral cats, urban animal hoarding and "crazy cat ladies". The book explores 'zoocities', the theoretical framework in which animal studies meet urban studies, resulting in a reframing of urban relations and space. Through the expansion of urban theories beyond the human, and the resuscitation of sociological theories through animal studies literature, the book seeks to uncover the phenomenon of 'humanimal crowding', both as threats to be policed, and as potentially subversive. In this book, a number of urban controversies and crowding technologies are analysed, finally pointing at alternative modes of trans-species urban politics through the promises of humanimal crowding - of proximity and collective agency. The exclusion of animals may be an urban ideology, aiming at social order, but close attention to the level of practice reveals a much more diverse, disordered, and perhaps disturbing experience.

Animals in Greek and Roman Thought Stephen Newmyer 2010-11-09 Although reasoned discourse on human-animal relations is often considered a late twentieth-century phenomenon, ethical debate over animals and how humans should treat them can be traced back to the philosophers and literati of the classical world. From Stoic assertions that humans owe nothing to animals that are intellectually foreign to them, to Plutarch's impassioned arguments for animals as sentient and rational beings, it is clear that modern debate owes much to Greco-Roman thought. *Animals in Greek and Roman Thought* brings together new translations of classical passages which contributed to ancient debate on the nature of animals and their relationship to human beings. The selections chosen come primarily from philosophical and natural historical works, as well as religious, poetic and biographical works. The questions discussed include: Do animals differ from humans intellectually? Were animals created for the use of humankind? Should animals be used for food, sport, or sacrifice? Can animals be our friends? The selections are arranged thematically and, within themes, chronologically. A commentary precedes each excerpt, transliterations of Greek and Latin technical terms are provided, and each entry includes bibliographic suggestions for further reading.

Speaking for Animals Margo DeMello 2012-11-07 For thousands of years, in the myths and folktales of people around the world, animals have spoken in human tongues. Western and non-Western literary and folkloric traditions are filled with both speaking animals, some of whom even narrate or write their own autobiographies. Animals speak, famously, in children's stories and in cartoons and films, and today, social networking sites and blogs are both sites in which animals—primarily pets—write about their daily lives and interests. *Speaking for Animals* is a compilation of chapters written from a variety of disciplines that attempts to get a handle on this cross cultural and longstanding tradition of animal speaking and writing. It looks at speaking animals in literature, religious texts, poetry, social networking sites, comic books, and in animal welfare materials and even library catalogs, and addresses not just the "whys" of speaking animals, but the implications, for the animals and for ourselves.

The Routledge Handbook of International Crime and Justice Studies Bruce Arrigo 2013-08-15 The *Routledge Handbook of International Crime and Justice Studies* presents the enduring debates and emerging challenges in crime and justice studies from an international and multi-disciplinary perspective. A distinguished collection of experts examine the interdisciplinary field of international crime and justice. Their contributions are divided into thematic sections, including: theory, culture, and society industries of crime and justice: systems of policing, law, corrections and punishment the criminal enterprise global technologies media, crime, and culture green criminology political violence public health criminology

the political economy of crime and justice. All the chapters include full pedagogy and instructional resources for easy referencing or classroom use. This Handbook will be useful for students, scholars and practitioners of law, medicine, history, economics, sociology, politics, philosophy, education, public health, and social policy.

Critical Animal and Media Studies Núria Almiron 2015-10-14 This book aims to put the speciesism debate and the treatment of non-human animals on the agenda of critical media studies and to put media studies on the agenda of animal ethics researchers. Contributors examine the convergence of media and animal ethics from theoretical, philosophical, discursive, social constructionist, and political economic perspectives. The book is divided into three sections: foundations, representation, and responsibility, outlining the different disciplinary approaches' application to media studies and covering how non-human animals, and the relationship between humans and non-humans, are represented by the mass media, concluding with suggestions for how the media, as a major producer of cultural norms and values related to non-human animals and how we treat them, might improve such representations.

Animal Studies Matthew R. Calarco 2020-09-29 Prefaced with a brief introduction to the field of animal studies, the text explores the key influential terms, topics and debates which have had a major impact on the field, and that students are most likely to encounter in their animal studies classes. *Animal Studies* provides a guide to key concepts in the burgeoning interdisciplinary field of animal studies, laid out in A-Z format. While *Human-Animal Studies* and *Critical Animal Studies* are the main frameworks that inform the bulk of the writings in animal studies and the key concepts discussed in the volume, other approaches such as anthrozoology and cognitive ethology are also explored. The entries in the volume attend to the differences in ongoing debates among scholars and activists, showing that what is commonly called "animal studies" is far from a unified body of work. A full bibliography of sources is included at the end of the book, along with an extensive index. The book will be a valuable guide to undergraduate and postgraduate students in geography, philosophy, sociology, anthropology, women's studies, and other related disciplines. Seasoned researchers will find the book helpful, when researching topics outside of their specialization. Outside of academia, it will be of interest to activists, as well as professional organizations.

The Routledge Handbook of Vegan Studies Laura Wright 2021-03-30 This wide-ranging volume explores the tension between the dietary practice of veganism and the manifestation, construction, and representation of a vegan identity in today's society. Emerging in the early 21st century, vegan studies is distinct from more familiar conceptions of "animal studies," an umbrella term for a three-pronged field that gained prominence in the late 1990s and early 2000s, consisting of critical animal studies, human animal studies, and posthumanism. While veganism is a consideration of these modes of inquiry, it is a decidedly different entity, an ethical delineator that for many scholars marks a complicated boundary between theoretical pursuit and lived experience. The Routledge Handbook of Vegan Studies is the must-have reference for the important topics, problems, and key debates in the subject area and is the first of its kind. Comprising over 30 chapters by a team of international contributors, this handbook is divided into five parts: History of vegan studies Vegan studies in the disciplines Theoretical intersections Contemporary media entanglements Veganism around the world These sections contextualize veganism beyond its status as a dietary choice, situating veganism within broader social, ethical, legal, theoretical, and artistic discourses. This book will be essential reading for students and researchers of vegan studies, animal studies, and environmental ethics.

The Routledge Handbook of Food Ethics Mary Rawlinson 2016-07-01 While the history of philosophy has traditionally given scant attention to food and the ethics of eating, in the last few decades the subject of food ethics has emerged as a major topic, encompassing a wide array of issues, including labor justice, public health, social inequity, animal rights and environmental ethics. The Routledge Handbook of Shakespeare and Animals Karen Raber 2020-08-11 Shakespeare's plays have a long and varied performance history. The relevance of his plays in literary studies cannot be understated, but only recently have scholars been looking into the presence and significance of animals within the canon. Readers will quickly find—without having to do extensive research—that the plays are teeming with animals! In this Handbook, Karen Raber and Holly Dugan delve deep into Shakespeare's World to illuminate and understand the use of animals in his span of work. This volume supplies a valuable resource, offering a broad and thorough grounding in the many ways animal references and the appearance of actual animals in the plays can be interpreted. It provides a thorough overview; demonstrates rigorous, original research; and charts new frontiers in the field through a broad variety of contributions from an international group of well-known and respected scholars.

The Routledge Handbook of Animal Ethics Bob Fischer 2019-12-06 There isn't one conversation about animal ethics. Instead, there are several important ones that are scattered across many disciplines. This volume both surveys the field of animal ethics and draws professional philosophers, graduate students, and undergraduates more deeply into the discussions that are happening outside of philosophy departments. To that end, the volume contains more nonphilosophers than

philosophers, explicitly inviting scholars from other fields—such as animal science, ecology, economics, psychology, law, environmental science, and applied biology, among others—to bring their own disciplinary resources to bear on matters that affect animals. The Routledge Handbook of Animal Ethics is composed of 44 chapters, all appearing in print here for the first time, and organized into the following six sections: I. Thinking About Animals II. Animal Agriculture and Hunting III. Animal Research and Genetic Engineering IV. Companion Animals V. Wild Animals: Conservation, Management, and Ethics VI. Animal Activism The chapters are brief, and they have been written in a way that is accessible to serious undergraduate students, regardless of their field of study. The volume covers everything from animal cognition to the state of current fisheries, from genetic modification to intersection animal activism. It is a resource designed for anyone interested in the moral issues that emerge from human interactions with animals.

The Imaginary of Animals Annabelle Dufourcq 2021-07-30 This book explores the phenomenon of animal imagination and its profound power over the human imagination. It examines the structural and ethical role that the human imagination must play to provide an interface between humans' subjectivity and the real cognitive capacities of animals. The book offers a systematic study of the increasing importance of the metaphors, the virtual, and figures in contemporary animal studies. It explores human-animal and real-imaginary dichotomies, revealing them to be the source of oppressive cultural structures. Through an analysis of creative, playful and theatric enactments and mimicry of animal behaviors and communication, the book establishes that human imagination is based on animal imagination. This helps redefine our traditional knowledge about animals and presents new practices and ethical concerns in regard to the animals. The book strongly contends that allowing imagination to play a role in our relation to animals will lead to the development of a more empathetic approach towards them. Drawing on works in phenomenology, contemporary animal philosophy, as well as ethological evidence and biosemiotics, this book is the first to rethink the traditional philosophical concepts of imagination, images, the imaginary, and reality in the light of a zoocentric perspective. It will appeal to philosophers, scholars and students in the field of animal studies, as well as anyone interested in human and non-human imaginations.

Animal Places Jacob Bull 2017-11-22 Nonhuman animals are ubiquitous to our 'human' societies. Interdisciplinary human/animal research has - for 50 years - drawn attention to how animals are ever-present in what we think of as human spaces and cultures. Our societies are built with animals and through all kinds of multispecies interactions. From public spaces and laboratories to homes, farms and in the 'wilderness'; human and nonhuman animals meet to make space and place together, through webs of power relations. However, the very spaces of these interactions are not mute or passive themselves. The spaces where species meet matter, and shape human/animal relations. This book takes as its starting point the relationship between place and human/animal interaction. It brings together the work of leading scholars in human/animal studies, from a variety of disciplinary and interdisciplinary backgrounds. With a distinct focus on place, physical space and biocultural geography, the authors of this volume consider the ways in which space, human and nonhuman animals co-constitute each other, how they make spaces together, produce meaning around them, struggle over access, how these places are storied and how stories of spaces matter. Presenting studies thematically and including a variety of nonhuman creatures in a range of settings, this book delivers new understandings of the importance of

nonhuman animals to understandings of place - and the role of places in shaping our interactions with nonhuman creatures. As pets, as laboratory animals, as exhibits, as parasites, as livestock, as quarry, as victims of disaster or objects of folklore, this book offers insights into human/animal intermingling at locales and settings of great relevance to many areas of research, including geography, sociology, science and technology studies, gender studies, history and anthropology. This book meets the evolving interest in human/animal interaction, anthrozoology, and the environmental humanities in relation to the research on space and place that currently informs the humanities and the social sciences.

Humans, Animals and Biopolitics Kristin Asdal 2016-07-01 Human-animal co-existence is central to a politics of life, how we order societies, and to debates about who 'we' humans think 'we' are. In other words, our ways of understanding and ordering human-animal relations have economic and political implications and affect peoples' everyday lives. By bringing together historically-oriented approaches and contemporary ethnographies which engage with science and technology studies (STS), this book reflects the multi-sited, multi-species, multi-logic and multiple ways in which lives are and have been assembled, disassembled, practised and possibly policed and politicized. Instead of asking only how control and knowledge are and have been extended over life, the chapters in this book also look at what happens when control fails, at practices which defy orders, escape detection, fail to produce or only loosely hang together. In doing so the book problematises and extends the Foucauldian notion of biopolitics that has been such a central analytical concept in studies of human-animal relations and provides a unique resource of cases and theoretical refinements regarding the ways in which we live together with more than human others .

Routledge Handbook of Religion and Ecology Willis J. Jenkins 2016-07-22 The moral values and interpretive systems of religions are crucially involved in how people imagine the challenges of sustainability and how societies mobilize to enhance ecosystem resilience and human well-being. The Routledge Handbook of Religion and Ecology provides the most comprehensive and authoritative overview of the field. It encourages both appreciative and critical angles regarding religious traditions, communities, attitude, and practices. It presents contrasting ways of thinking about "religion" and about "ecology" and about ways of connecting the two terms. Written by a team of leading international experts, the Handbook discusses dynamics of change within religious traditions as well as their roles in responding to global challenges such as climate change, water, conservation, food and population. It explores the interpretations of indigenous traditions regarding modern environmental problems drawing on such concepts as lifeway and indigenous knowledge. This volume uniquely intersects the field of religion and ecology with new directions within the humanities and the sciences. This interdisciplinary volume is an essential reference for scholars and students across the social sciences and humanities and for all those looking to understand the significance of religion in environmental studies and policy.

What is an Animal? Tim Ingold 2016-04-29 This book offers a unique interdisciplinary challenge to assumptions about animals and animality deeply embedded in our own ways of thought, and at the same time exposes highly sensitive and largely unexplored aspects of the understanding of our common humanity.

Animal Ethics and Theology Daniel Miller 2013-03-01 In this book, Daniel K. Miller articulates a new vision of human and animal relationships based on the foundational love ethic within Christianity. Framed around Jesus' parable of the Good Samaritan, Animal Ethics and

Theology thoughtfully examines the shortcomings of utilitarian and rights-based approaches to animal ethics. By considering the question of animals within the Christian concept of neighbourly love, Miller provides an alternative narrative for understanding the complex relationships that humans have with other animals. This book addresses significant theological questions such as: Does being created in the image of God present a meaningful distinction between humans and other animals? What does it mean for humans to have dominion (Gen. 1:28) over animals? Is meat eating a moral problem for Christians? In addition to drawing out the significance of Christian theology for field of animal ethics this book also engages environmental and feminist ethics. Miller brings a theological perspective to such questions as: Should care for animals be distinguished from care for the environment, and what role should human emotions play in our ethical dealings with other animals? As the title suggests, this book provides fresh insight into the theological significance of human relationships with other animals.

Critical Animal Geographies Kathryn Gillespie 2015-01-30 *Critical Animal Geographies* provides new geographical perspectives on critical animal studies, exploring the spatial, political, and ethical dimensions of animals' lived experience and human-animal encounter. It works toward a more radical politics and theory directed at the shifting boundary between human and animal. Chapters draw together feminist, political-economic, post-humanist, anarchist, post-colonial, and critical race literatures with original case studies in order to see how efforts by some humans to control and order life – human and not – violate, constrain, and impinge upon others. Central to all chapters is a commitment to grappling with the stakes – violence, death, life, autonomy – of human-animal encounters. Equally, the work in the collection addresses head-on the dominant forces shaping and dependent on these encounters: capitalism, racism, colonialism, and so on. In doing so, the book pushes readers to confront how human-animal relations are mixed up with overlapping axes of power and exploitation, including gender, race, class, and species.

Animal Housing and Human–Animal Relations Kristian Bjørkdahl 2016-05-12 This book provides an in-depth investigation into the practices of animal housing

systems with international contributions from across the humanities and social sciences. By attending to a range of different sites such as the zoo, the laboratory, the farm and the animal shelter, to name a few, the book explores material technologies from the perspective that these are integrated parts of a larger biopolitical infrastructure and questions how animal housing systems, and the physical infrastructures that surround central human-animal practices, come into being. The contributions in the book show in various ways how physical infrastructures of animal housing are always part of a much broader sociocultural and political infrastructure, where the material reality of housing systems combines with human and animal agents, with politics, and with practices. As such, the book explores what kind of practices and relations develop around the physical structures of animal housing, and by whom, and for whom, they are developed. This innovative collection will be of great interest to student and scholars in animal studies, more than human studies, geography, anthropology, and sociology.
